2. Citations and explanations:

The invention concerns a method and a tool for joining flanges or other coupling elements to pipes as stated in the preambles of claims 1 and 2.

I order to achieve a good seal and to provide a tool that is operated only radially, buckled-in areas are after-pressed outwardly as stated in claim 1 with a tool comprising radially moving segments as stated in claim 2.

Cited documents:

D1: US 4154464 A

D2: RU 2159689 (abstract)

From D1 is known a method for joining a coupling element to a pipe where circular beads are pressed into corresponding grooves in the surrounding coupling element. Thereafter the inner side of the pipe is burnished, which, obviously, achieves an after-pressing operation of eventually buckled-in areas in the pipe.

The method in claim 1 does not in a clear way differ from this known method.

See also D2 from which is known a method for joining a coupling element to a pipe where circular beads are pressed into corresponding grooves in the surrounding coupling element.
